

# Frontend Developer (f/m/d)

**Specialized in 3D-Laserscanning, we develop innovative hardware and software solutions for efficient capturing and processing of digital 3D twins of real estate. You want to become a part of our dynamic, international and multidisciplinary team? Join us!**

dotscene is looking for an experienced frontend developer (f/m/d) who will contribute to our online platforms and engineering tooling solutions. In your role, you will participate in developing and testing our frontend services, from initial design and implementation to deploying into production. You'll advance our testing strategy and iterate closely with our internal users.

## Your skills

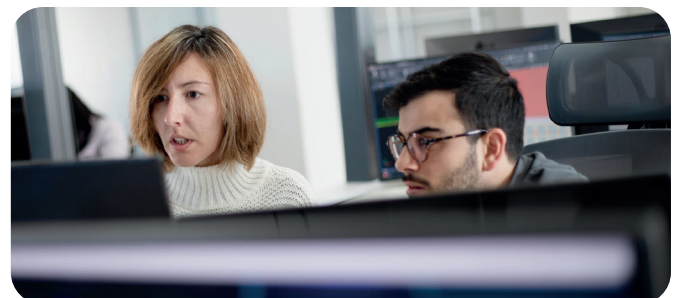

- Experience with Typescript and with at least one of the popular JavaScript frameworks
- Taking care of writing maintainable, tested, documented, clean code, while appreciating the balance between new releases and perfection
- Experience writing and consuming APIs
- Experience in bringing a UI/UX design draft to life

## Nice to have

- Experience with one or more of the following: Vue.js, Cypress, Golang, MySQL, MongoDB
- Experience with 3D browser visualization, WebGL/WebGPU/three.js
- Advanced testing and security focus
- Knowledge in Android/iOS development
- Experience building microservices
- Ability to properly package and deploy said services to production

## We offer

- A tight fit team with flat hierarchies in which your work really counts!
- Flexible working hours
- Free coffee and pretty point clouds
